Berkley, Calif. 94701

Dear Sir(s) or Madam:

Attached is the agenda for the planning session on the Herd Creek Allotment. As mentioned previously this session will be conducted by A. L. "Gus" Hormay, who is well known and highly recognized for his contributions toward promoting proper management and use of natural range lands.

The meeting will start at 8:30 A.M. on Tuesday, October 22, 1974, at the American Legion Hall, Challis, Idaho.

Listed below are motels in Challis where you can make your room reservations:

<table>
<thead>

Dear Gus:

Enclosed is a Matador Allotment Map, which shows proposed locations  
for fences, cattleguards, and pipelines.

We met on the allotment, with Marion Cross, State Division of Lands,  
and SCS, to work out the fence line locations. Montana Department  
of Fish & Game, and the Beaverhead County Agent were also invited,  
but were unable to attend.

We would appreciate any comment in the way of suggestions, which you  
may have relative to location of these projects.

Sincerely yours,

[Signature]

Steve B. Wilkinson  
Sacajawea Area Manager

Memorandum

TO: Jack McIntosh, District Manager, Dillon, Montana
FROM: August L. Hormay, Range Conservationist
SUBJECT: Matador Allotment Management Plan

October 31, 1974

This is in reply to Steve Wilkinson's October 21, 1974 letter to me.

I am glad to see you move ahead so quickly with planning management on the Matador Allotment. Keep it rolling. Involve as many interests as you can in the development of the plan. We will get with finalizing a plan sometime before the coming growing season.

The general location of the proposed fences, pipelines and cattleguards is satisfactory. The pinch on the allotment is in grazing capacity in springtime on the areas below the "poison" line in the middle and south pastures. Check and see if these areas have capacity individually to carry the stock until the poison period is past. If not, look closer at the possibility of increasing capacity by locating the poison fence farther east especially the south segment.

Judging by size and what I remember of the areas the middle pasture area appears to have less capacity than the south pasture area. If this is so the capacities of the two areas possibly can be brought into better balance by locating the east segment of the fence between them farther to the south and east.

As brought out in the planning session keep wildlife, recreation and esthetic values in mind in locating facilities and determining the type of facilities and method of installation.

Please continue to write me if you have questions.
