Sept 11 (Thursday)

8:00 AM approx left with group
See Ethel
don Malloy Attorney
Joe Egan $86
Dick Trueblood $86

To look at Ethel's allotments Hinsdale Livestock Company
Current forage growth about 30 percent of normal. Spotty correlation with spring precipitation. Utilization pattern normal. Heavy use in ravine bottoms around water on gentle slopes close to water, and "greened up" areas. Much area in grazed pasture not used or only lightly because of lack of green growth.
The bulk of the sewage intake has consisted of old growth accumulated over the last two years.
PM Sept 21

Traced Edwin Gospacker allotment
with group and
Edwin Gospacker.
Large area grazed
only lightly because
of lack of stockwater

Grazing has been
heavy in The last
Cochele Drainage
including the 5 Ponds
where some stock
water still remains
This year a larger than normal area
was grazed around some wetter places
because water in other locations gradually
decreased and dried up altogether forcing
tulks to graze on areas where water
was still available.

Much vegetation left on all but
wildlife.
