```
Changed from rest rotation because no improvement or response of key forage species was noted. Native pastures are dominated by clubmoss and blue grama which have showed little response or change in plant composition from periods of rest.
```

Area was grazed by sheep during 1930's and 40's.

Where system, other than continuous, was terminated after a period of use, give reason for termination.

Rest rotation was revised to deferred rotation because little response was noted to key forage species. Vegetation consists of blue grama and club moss which appears not to respond to rest periods.

Allotment was heavily used by horses during the 1930's and 40's

Where system, other than continuous, was terminated after a period of use, give reason for termination.

Operator was unable to follow rest rotation system due to rough topography and lack of reliable water for livestock during the summer. System would work well in this area if the grazing plan could be more closely followed.

This allotment has 2 pastures; 1 each from 2 larger allotments owned by 2 grazing associations owned by 5 parties. Each of the larger allotments were under a rest rotation system. This system did not work because with 5 parties, pastures were being overused. Adjustments to deferred rotation were tried but the associations were dissolved in 1986.

Pasture seasonlong deferred until 6/15 every year

Where system, other than continuous, was terminated after a period of use, give reason for termination.

Bulls were not acceptable to the three operators in the common, which made it necessary to further divide the pastures for individual use. Quarantine forBangs has also caused problems with the common use by 3 herds of livestock.
